1. This communication is in response to applicant's amendment received on December 5, 2003.

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 20 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Gokhale (US 4,835,467).

Gokhale discloses a method of detecting rotational speed and angular position of a rotating wheel with a non-contact sensor that provides a pulse train of output signal wherein the switching threshold is adjusted after comparing the amplitudes of the pulses with the switching threshold value (Note figure 4).

4. Applicant's arguments with respect to claim 1,20 have been considered but are moot in view of the new ground(s) of rejection.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Note Form PTO-892.
